Resource efficiency in logistics

Our logistics business – Taylor Wimpey Logistics – sources materials directly from manufacturers and delivers them to our sites. These materials range from large items such as timber and window frames, right down to screws, fixings and ironmongery.

Resource efficiency is a key priority. When materials arrive at the warehouse they are sorted into site-specific build packs. This ensures they are delivered in the right quantities at the right time with less disruption to the build process and reduced potential for loss or damage.

The packs are delivered by our transport supplier. Drivers are trained and incentivised to drive efficiently, avoiding excessive acceleration and harsh braking. This helps to reduce fuel consumption and associated carbon emissions.

During 2018, our logistics business will be undertaking a packaging review, looking for opportunities to use packaging more efficiently.

Taylor Wimpey Logistics picks, packs and dispatches up to 100,000 items a week.
